

Storage conditions for non cross-linked low density polyethylene products

The products should be kept away from direct contact with sunlight and especially UV radiation. Artificial light should have colour temperature of less than 6500K. Warmer colour of around 2700K is recommended.

The temperature range in which the product should be used is -20°C to +50°C. Recommended storage temperature is 18°C to 40°C, except for antistatic products that should not be stored above 30°C.

It is recommended to store the product in dry, well-ventilated, indoor storage spaces, away from fire and heating units.

The product does not pose a fire risk if the above requirements are met.

The product may be damaged by contact with organic solvents. The product is not toxic and does not require any special security measures. It is not harmful to the environment thanks to reusing of processing waste.

The product can be 100% recycled.
